A compact upper low pressure system tracked across eastern Nebraska and western lowa early in the afternoon on 3/31/07. Just ahead of this system, from extreme eastern Nebraska into western lowa, partial sunshine allowed temperatures to climb to around 70 degrees with dewpoints in the 50s, while a bit farther to the west in the Columbus and Norfolk areas, readings were in the 40s. The contrast in temperatures and dynamics from the upper low helped kick off severe thunderstorms across the area, including at least one short-lived tornado west of Herman, Nebraska.

03/03/07 08:00 CST 0

A dangerous and powerful winter storm hit much of eastern Nebraska and southwest lowa during the morning and early afternoon hours of Thursday, March 1, 2007. After a lull in the wind...snow and blowing snow late Thursday...strong winds and scattered snow showers moved back across much of the region Friday bringing a return of blizzard or near blizzard conditions. Although skies cleared Friday night, substantial blowing snow continued over a large part of the area into Saturday morning. The storm closed most schools across eastern Nebraska and western lowa both Thursday and Friday.

This storm brought heavy snow combined with very strong northwest winds to create whiteout conditions and near zero visibility. Wind gusts were frequently over 35 mph with peak gusts of 45 to 58 mph recorded Thursday and peak gusts of 40 to 45 mph measured on Friday. Travel became impossible for many stranded motorists, and many roads were closed. The storm was associated with an unusually deep low pressure system, which bottomed out around 979 mb over central lowa Thursday afternoon. The storm initially developed quickly over eastern Kansas late Wednesday.

Some of the heavier snow amounts for the 24 hours ending Friday morning included... $\label{eq:control}$

of this system, from extreme eastern Nebraska into western lowa, partial sunshine allowed temperatures to climb to around 70 degrees with dewpoints in the 50s, while a bit farther to the west in the Columbus and Norfolk areas, readings were in the 40s. The contrast in temperatures and dynamics from the upper low helped kick off severe thunderstorms across the area, including at least one short-lived tornado west of Herman, Nebraska.
